

Linseed Putty

Linseed Putty is made from our raw linseed oil and different types of chalk. The putty can be used for windows and as a filler for interior and exterior holes and cracks.

Instructions

- Empty out the whole pot and knead the lump of putty until soft before use. This will be easier if the putty is warmed up, e.g. in water bath or on a radiator.
 - Kneaded putty can stay out on the table for several days. Left-over putty can be kept in the freezer.
 - Ideally use at room temperature. If the putty is too sticky, knead it on a piece of card or add chalk. If it is too hard, warm it up or add raw linseed oil.
 - The edges of the glass must be free from dirt, paint and putty.
- Brush shellac into the putty rebates before glazing. This prevents the oil from leaching into the wood and considerably extends the lifetime of the putty.
 - Make sure that the glass is carefully pinned and supported with wooden blocks to avoid movement in the putty rebates.
 - Brush the glass free of oil residue with ground pumice and a soft brush.
 - Paint all three coats out approximately 2 cm onto the glass.
 - The putty can be painted over immediately.
 - Once the paint is dry, damp the surface of the glass with a little slightly soapy water. Cut the edges of the putty rebates to 2 mm over the glass with a steel scraper and a razor blade scraper.
